PaymentStatus

Revenue_ZAR by Year

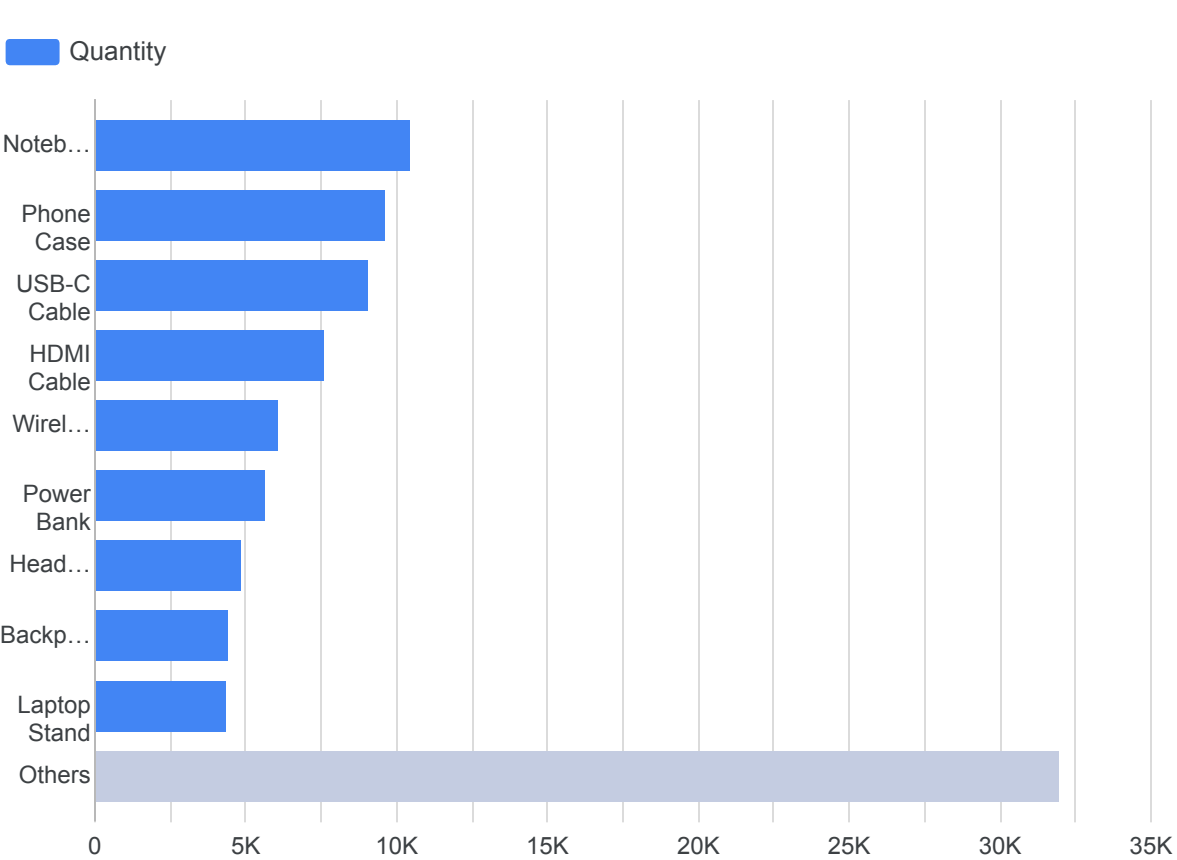

Sales were steady for two years, then dropped about 34% (R75,672) from February 2026.

Revenue_ZAR by ProductName

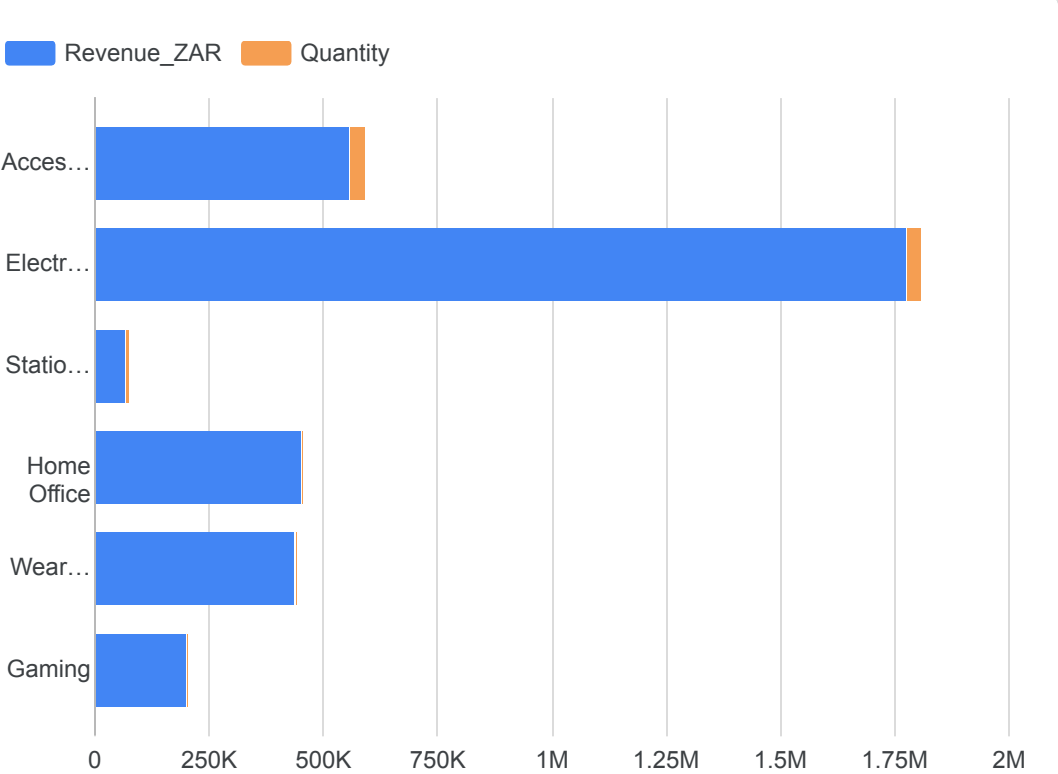

Headphones, Office Chair and Tablet earn the most, so keep them well stocked and promoted.

Quantity by ProductName

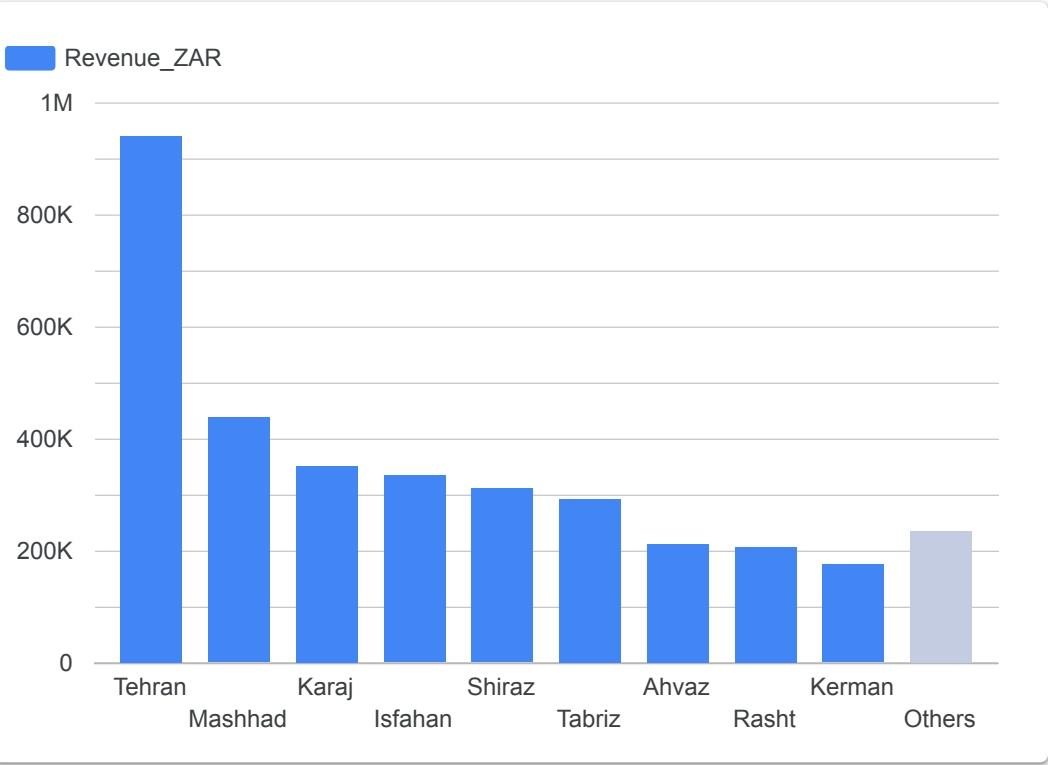

Notebooks, phone cases, and USB-C cables sell the most items but earn little, so they don't drive the money.

Revenue_ZAR and Quantity by Category

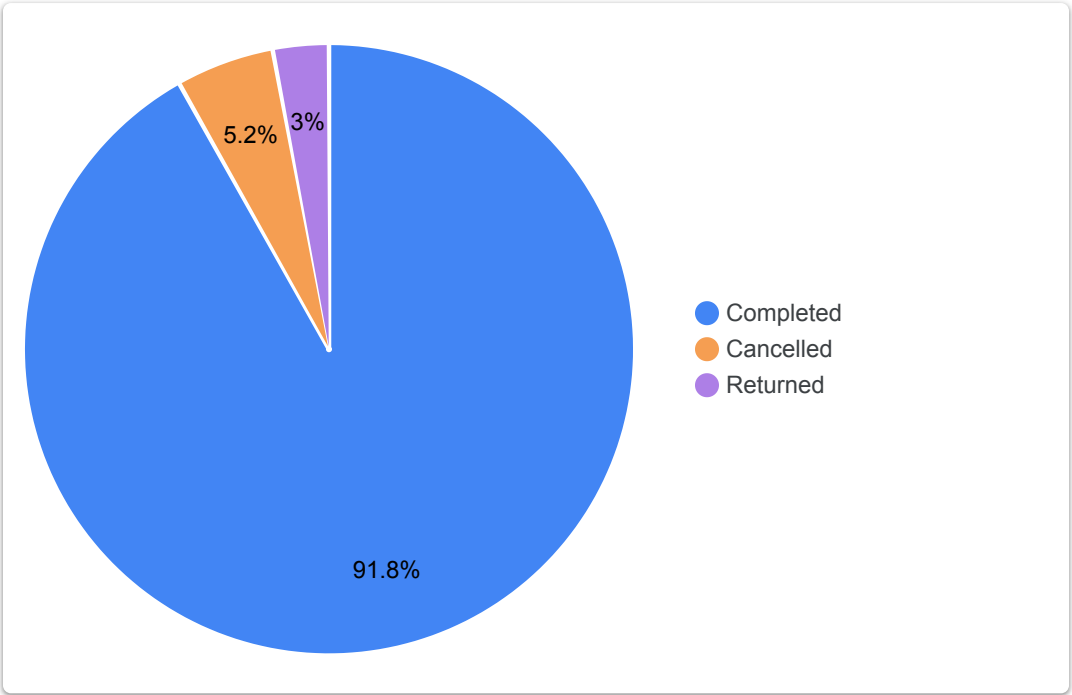

category Electronics brings in half of all revenue, so the shop depends on it.

Revenue_ZAR by City

Tehran alone gives over a quarter of the revenue, so keep it and focus on making improvements on growing the other cities.

Status by Revenue_ZAR

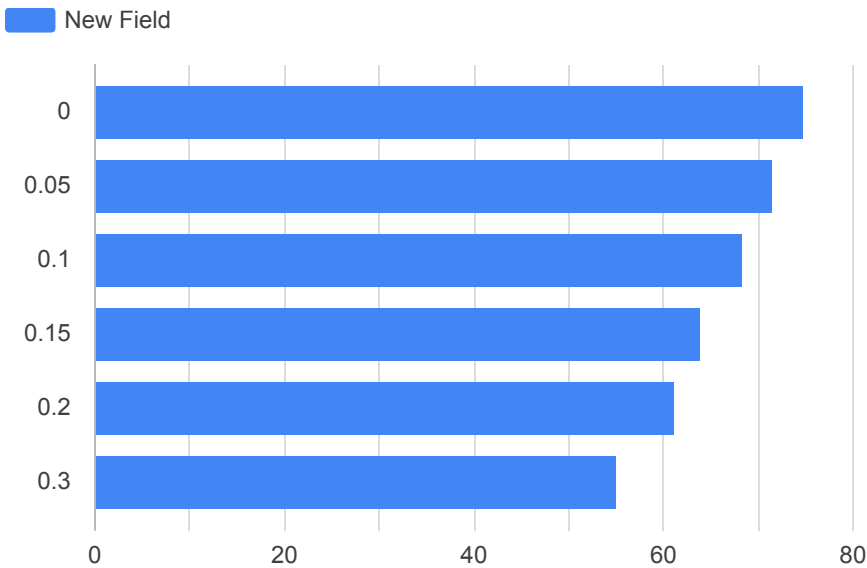

About 103,381 orders were returned, and 181,620 orders were also cancelled, which is a huge sales loss.

CustomerSegment		Revenue_ZAR ▾
1.	Regular	283
2.	New	274
3.	VIP	240

1 - 4 / 4 < >

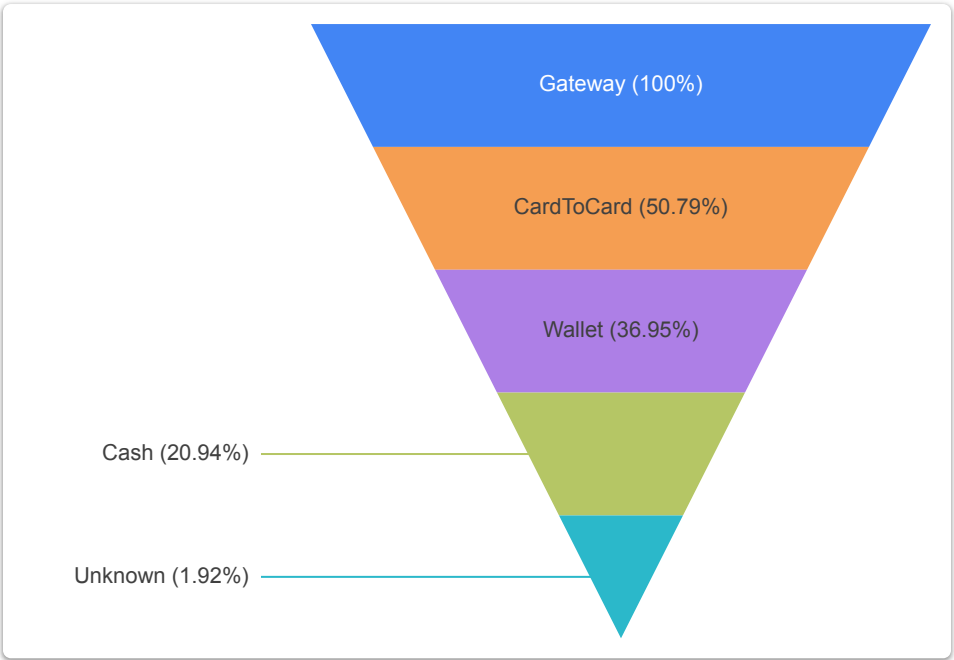

This shows earnings per/customer on Average transaction.VIP customers spend no more than new ones, so the VIP label isn't earning extra revenue yet.

Discount By Average_order_value

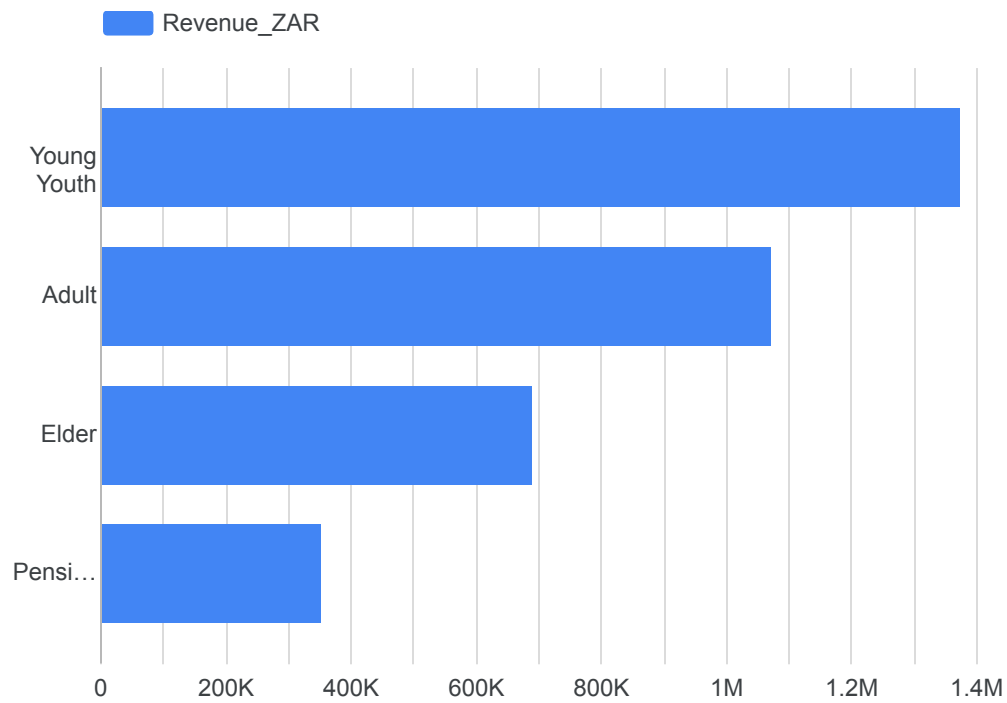

Bigger discounts make orders worth less and don't make customers buy more, so deep discounts just cost money.

Payment_method

Except for the Gateway, which uses PayPal. Every payment method fails at about the same rate, so the problem is the process, not a single method.

Sales are more towards younger age categories (Youth and Adult), marketing campaigns and product inventory should continue targeting these segments.

	Age_Group	Custom...	Revenue_ZAR ▾
1.	Young Youth	Regular	773,840
2.	Adult	Regular	583,354
3.	Young Youth	New	472,882
4.	Elder	Regular	388,800
5.	Adult	New	375,027
6.	Elder	New	230,948
7.	Pensioner	Regular	196,229
8.	Pensioner	New	126,436
9.	Young Youth	VIP	124,338
10.	Adult	VIP	113,681
11.	Elder	VIP	60,528

Regular Customers Outperform Across All Ages: Within every age bracket, Regular customers consistently generate more revenue than New or VIP customers.

Insights & Recommendations to the CEO:

1. Fix the money that slips through payments. About 1,750 completed orders have a failed payment, which affects revenue. Another 2,308 cancelled orders are marked as paid but didn't go through, so check those refunds. Failure rates are similar across all payment methods (about 3.6–4.0%), so this is a process problem and not a payment-method problem.
2. Stop giving discounts above 15%. Discounts cost the shop about 246k from January 2024 to June 2026. Bigger discounts make orders worth less and don't make customers buy more, so deep discounts just cost money. Try small offers or bundles instead.
3. Orders dropped in February 2026. Revenue held at about 105k a month through 2025, then fell to about 71k from February. That is roughly 169k lost in five months. Fewer customers are ordering, so the cause is likely traffic, marketing, stock, or checkout (payment process) rather than prices. All involved departments must improve on those causes, since the Young youth and regular customers generate more sales; put more focus on their purchases and improve on the other age and customer segments.

Data problems and what I did

1. Duplicates: 120 repeated order lines. I removed them.
2. Missing values: blank discounts (221) became 0%; blank payment methods and cities became "Unknown".
3. Messy city names: "tehran" and "Mashad" were fixed to "Tehran" and "Mashhad".
4. Age Group bucket: all different ages were grouped to analyse which people buy the most based on which category.
5. 35 orders without a date remained, and I replaced them with the previous order date since their payments contributed to the revenue.
