Net_Revenue_by Year

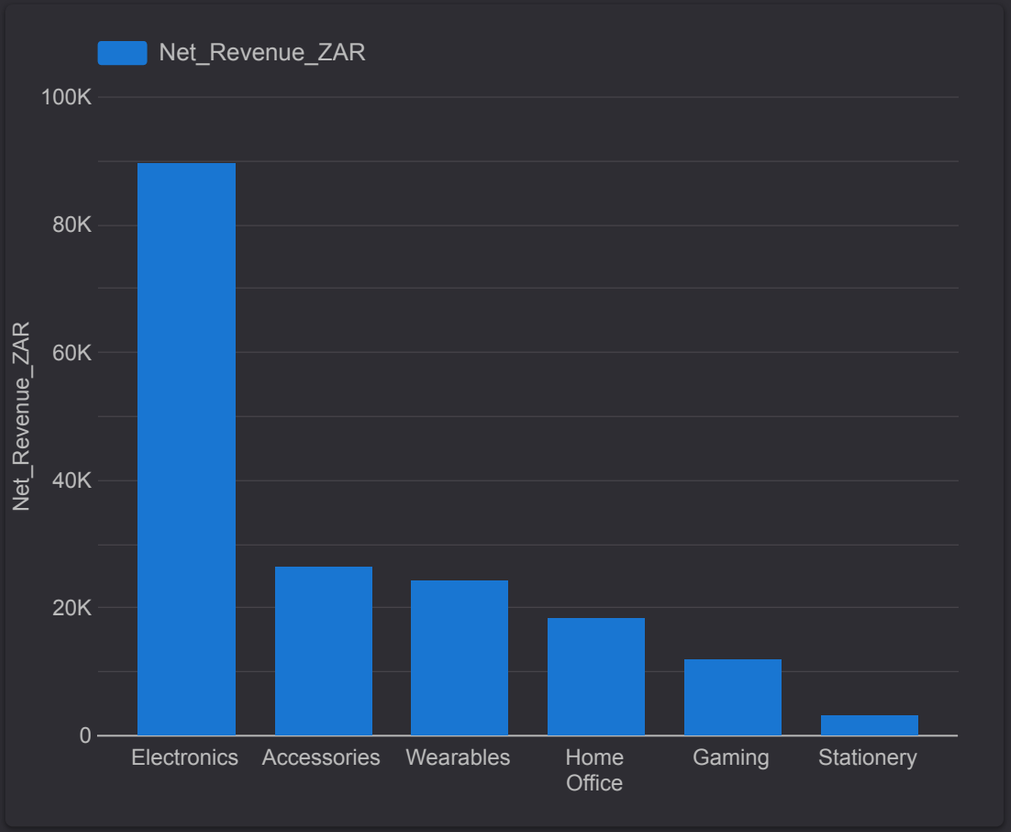

Net revenue peaked at approximately R1.4 million in 2025 before dropping sharply to around R511,500 in 2026, representing a decrease of roughly 63.5%.

Net_Revenue by ProductName

Headphones lead product net revenue at 100%, followed by Office Chair at 84.73% and Tablet at 81.57%. Fitness Band ranks lowest among the top listed items at 47.93%.

Net_Revenue by Category

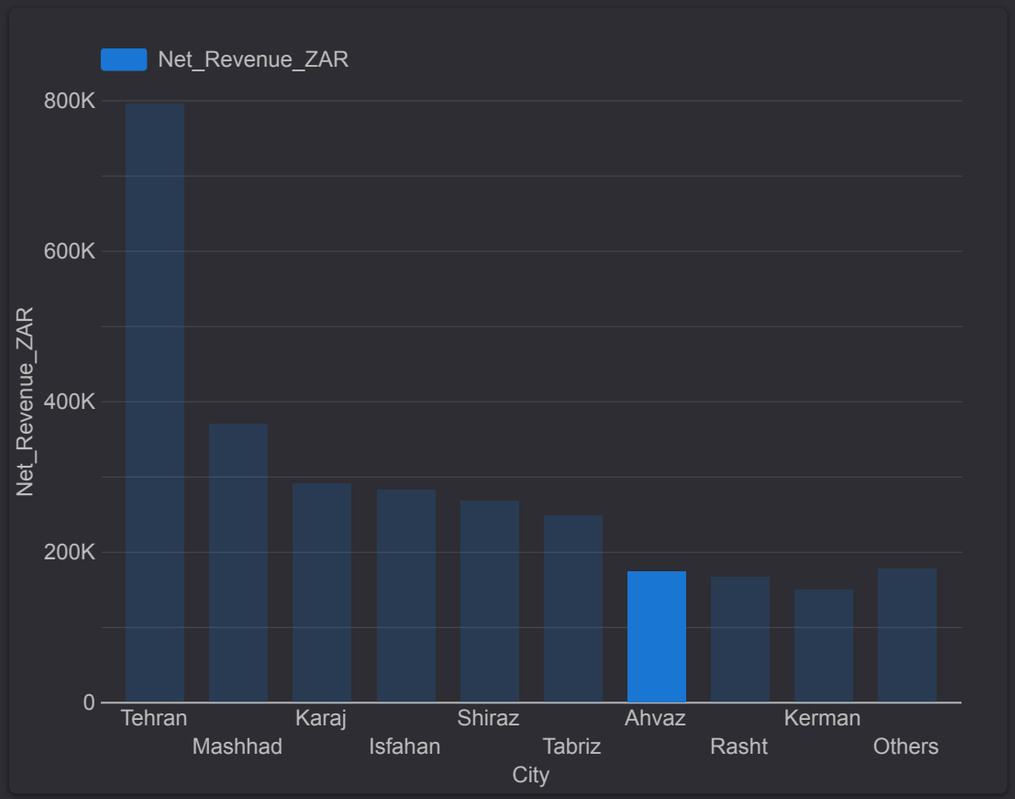

Electronics leads net revenue at approximately R1.4 million, significantly outperforming all other categories.

Accessories follows at roughly R500,000, representing a 64.3% drop compared to Electronics.

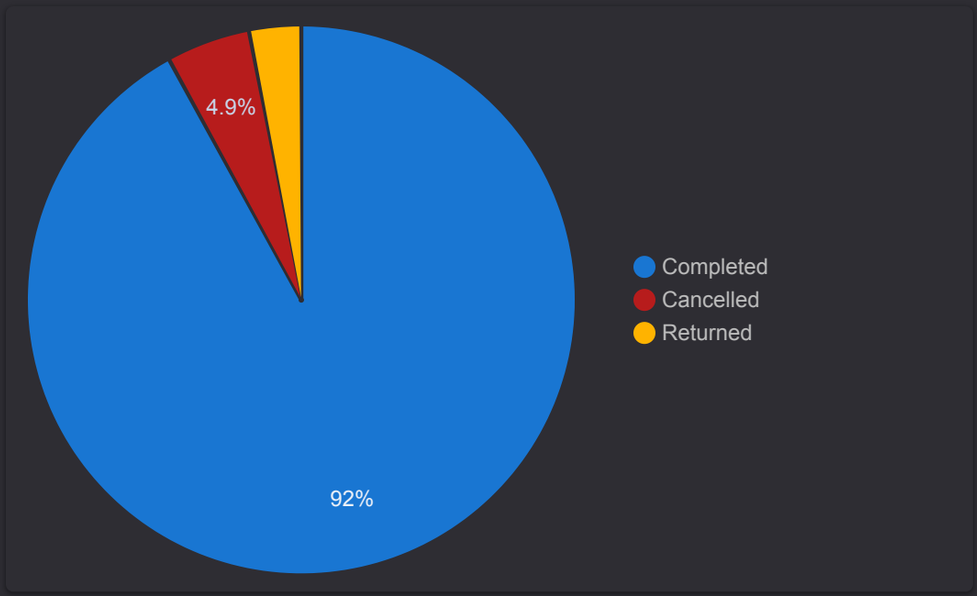

Home Office generates about R400,000, which is 20% lower than Accessories.

Net_Revenue by ProductName

Tehran leads city net revenue at approximately R15,000, significantly outperforming the other regions

Status by Record Count

	CustomerSegment	Net_Revenue_ZAR	Quantity
1.	Regular	1,618,225	52,181
2.	New	1,015,253	32,709
3.	VIP	283,305	9,204

1 - 3 / 3

Completed orders dominate the breakdown at 92.0%, significantly outperforming all other statuses

Regular customers lead net revenue at approximately R1,618,225 (55.5% share with 52,181 units sold), significantly outperforming other segments.

Age_Group by Record Count

1.	Young Youth		
2.	Adult		
3.	Pensioner		
	Grand total	**3**	**2,916,783**

1 - 4 / 4

The table breaks down total net revenue of R2,916,783 across customer age groups (Young Youth, Adult, Pensioner, and Elder).

Discount	AVG Oder Va…	Net_Revenue_ZAR	AVG Oder Value
0	62.09123404…	1,094,358	62.09
0.05	60.26247009…	654,812	60.26
0.1	57.00430861…	568,903	57
0.15	53.43475366…	321,036	53.43
0.2	51.82331562…	185,372	51.82
0.3	47.48045267…	92,302	47.48

Deeper discounts do not bring out larger basket sizes; instead, they correlate with significantly lower total earnings and smaller average order values.

Insights and Recommendations to the CEO

1. Fix the money that slips through payments. About 1,750 completed orders have a failed payment, which affects revenue. Another 2,308 cancelled orders are marked as paid but didn't go through, so check those refunds. Failure rates are similar across all payment methods (about 3.6–4.0%), so this is a process problem and not a payment-method problem.

2. Stop giving discounts above 15%. Discounts cost the shop about 246k from January 2024 to June 2026. Bigger discounts make orders worth less and don't make customers buy more, so deep discounts just cost money. Try small offers or bundles instead.

3. Orders dropped in February 2026. Revenue held at about 105k a month through 2025, then fell to about 71k from February. That is roughly 169k lost in five months. Fewer customers are ordering, so the cause is likely traffic, marketing, stock, or checkout (payment process)rather than prices. All involved departments must improve on those causes, since the Young youth and regular customers generate more sales; put more focus on their purchases and improve on the other age and customer segments.

4.A breakdown of sales by product category and top-selling items often reveals that a small percentage of products drive the majority of revenue. If popular items face stockouts during peak shopping days (e.g., weekends or specific weekdays), revenue takes an immediate hit.

5.Align promotional email blasts, social media ad pushes, and flash sales with peak conversion windows (identified via the Day_name and Month fields).

Data problems and what I did

1. Duplicates: 120 repeated order lines. I removed them.

2. Missing values: blank discounts (221) became 0%; blank payment methods and cities became "Unknown".

3. Messy city names: "tehran" and "Mashad" were fixed to "Tehran" and "Mashhad".

4. Age Group bucket: all different ages were grouped to analyse which people buy the most based on which category.

5. 35 orders without a date remained, and I replaced them with the previous order date since their payments contributed to the revenue.
